

Congratulations, Horse Owner!

Your veterinarian has microchipped your horse with a Datamars Equine SLIM Microchip. The microchip has been implanted on the left side of your horse's neck, between the poll and the withers.

The Datamars Equine SLIM Microchip comes with an optional registration. USEF and many breed organizations require registering the microchip in their database, but you can also register your microchip in PetLink.net

The Benefits of Registering with PetLink.net:

- ✓ **Reunification during natural catastrophes.** Floods and fires can happen anywhere; by registering with PetLink.net you will be called when your horse is found and scanned.
- ✓ **Proof of ownership.** By registering with PetLink.net you can verify horse identification and ownership when faced with horses that look similar.
- ✓ **Registration is easy!** Simply go to www.petlink.net to get started. A one-time fee of \$24.95 will apply for a lifetime of protection.
