

# SaeboMAS mini

The *SaeboMAS mini* is a lightweight, zero gravity, dynamic mobile arm support that challenges and assists the weakened shoulder and elbow during functional tasks. This compact device was specifically designed for clients suffering from neurological and orthopedic conditions resulting in shoulder and elbow weakness.

The *SaeboMAS mini* is the ideal home program solution to assist with improving strength, motor recovery, and independence. Clients will be able to perform functional exercises with greater ease and minimal compensation. Additionally, this personal device allows for enhanced independence for self-care, leisure or occupational tasks like using a computer, eating, drinking, or grooming.

The main feature of the *SaeboMAS mini* is the tension system. Based on the functional goals, the adjustable spring based parallelogram provides precise customization for assistance or resistance. Whether the client requires extra assistance for functional tasks or less assistance to further challenge his or her strength during exercise, the proprietary tension system is fully adjustable.

## Features:

- Adjustable spring based parallelogram offering various levels of assistance.
- Incorporates all planes of movement so multi-directional activities can be achieved.
- Height adjustable.
- Includes a portable table mount.
- Comfortable malleable forearm support with removable liners for cleaning.
- Lightweight and portable.

## Benefits:

- Increases motor control, strength and ROM.
- Improves ADL performance.
- Minimizes/prevents over-use injuries and unwanted movement.
- Safe and effective way to treat shoulder subluxation.
