

Chemical Engineer

Job Description:

At Kubica Corp, we strive to provide excellent solutions and services because our customers matter, making us an industry leader. We are seeking a driven and talented Chemical Engineer that is interested in delivering excellence in execution as a part of our team! We have become a respected leader in this industry by holding firm to our core values and delivering excellence to our customers.

If You:

- Are a dynamic thinker
- Have a high degree of self-efficacy
- Are flexible in the face of change and determined to continuously improve
- Thrive in a cohesive team
- Want to work where your ideas matter

Then Kubica is the place for you!

The chemical engineer is responsible for gathering relevant process information to develop the appropriate solution and follow through from concept to completion. These include capital projects, advancement in plant safety, and continuous process improvement opportunities.

Education / Experience:

- Minimum of a Bachelor's of Science degree in Chemical Engineering is required
- Prior experience with chemical, oil & gas, pharmaceutical and food industries are preferred
- Experience in industrial settings is desired.

Skills and Special Requirements:

Ideal candidate is proficient in the following skill sets:

- Effective troubleshooting and communication skills
- Ability to collaborate through group design and peer reviews
- Scheduling flexibility, sense of urgency, motivation and versatility to make a substantial contribution to the teams' success
- Proven team player and willingness to work "above and beyond" in order to meet company goals and customer's needs

Background screening including previous employment, education, criminal history and driving record verification may be conducted.
