

Veeam® Backup for Office 365

Total access, control and protection of Office 365 email data

Veeam® Backup for Microsoft Office 365 enables organisations to eliminate the risk of losing access to Office 365 email data and ensure availability for your users.

Never lose access to your email

Whether you have completely migrated to Office 365, have a hybrid Exchange and Office 365 deployment, or offer Office 365 backup services, your business objectives remain the same. You must remain in control of your data, and you need Office 365 backup and recovery at your fingertips.

With Office 365, it's your data

Microsoft Office 365 enables your Always-On Enterprise™ to work anywhere, anytime, without the need to host your own email infrastructure. It also provides a great way to minimise your onpremises footprint and free up IT resources. Even though Microsoft hosts the infrastructure, this doesn't replace your responsibility to maintain a backup of your Office 365 data.

What's new in version 1.5

Increased scalability

A multi-repository, multi-tenant architecture enabling protection of larger Office 365 deployments with a single installation, while also empowering service providers to deliver Office 365 backup services.

Powerful automation and self-service restore

Comprehensive automation with full PowerShell and RESTful API support for all functionality as well as self-service restore for service provider's customers to minimise management overhead, improve recovery times and reduce costs.

Expanded platform support

Including protection of Public Folders, deeper integration for hybrid email deployments, and extended support to include Office 365 U.S. Government (DoD and non-DoD), Office 365 Germany and Office 365 China.

With Office 365, it's your data – you control it – and it is your responsibility to protect it.

With Veeam Backup for Office 365, you can:

- Take control of your organisation's Office 365 data
- Reduce the time and effort needed to find and restore email data
- Protect against data loss scenarios that are not covered by Microsoft
- Facilitate the migration of email data between Office 365 and on-premises Exchange

Backup Office 365 and Exchange on-premises

You need to securely backup Office 365 email data to another location for a variety of reasons (i.e. to follow the 3-2-1 Rule of backup, to facilitate eDiscovery and to meet internal policies and compliance requirements). The most important reason being — to mitigate risk and have the peace-of-mind that you'll be able to restore your users' data when needed!

With Veeam Backup for Microsoft Office 365, you can retrieve Office 365 Exchange Online mailbox items (email, calendar and contacts*) from a cloud-based instance of Office 365 and uniquely back up this mailbox data into the same format that Microsoft Exchange uses natively — an archive database based on Extensible Storage Engine (ESE), also known as the Jet Blue database. You can also backup Exchange on-premises utilising the same APIs as Office 365 reducing the impact to your running Exchange infrastructure and allowing more frequent backups of your users email data.

Restore Office 365 email, calendars, and contacts

Never settle for less than fast, efficient restore of Office 365 mailbox items for granular recovery.

Built-in Veeam Explorer for Microsoft Exchange allows for quick search and recovery of individual mailbox items residing in either archived Office 365 content or on-premises Exchange backups. Mailbox items can be restored directly to an Office 365 mailbox, an on-premises Exchange mailbox, saved as a file, emailed as an attachment or exported as a PST.

eDiscovery of Office 365 email archives

Without a local copy of your data, retrieving emails for regulatory or compliance reasons can be costly and time consuming, and can ultimately present a major disruption to normal business operations.

But, not with Veeam! You can leverage the familiar, advanced search capabilities and the flexible recovery and export options of Veeam Explorer for Microsoft Exchange to perform eDiscovery on Office 365 email archives — just as easily as you would with an on-premises Exchange server backup.

Meet compliance requirements

With an Office 365 backup, you can keep your email data as long as you need, and store data based on long-term retention policies for regulatory or compliances needs. With granular advanced search and find functionality, you can ensure you recover exactly what you need, not more than you need.

Efficiently scale and minimise overhead

Unmatched scalability with a multi-repository, multi-tenant architecture, comprehensive automation with full PowerShell and RESTful API support, as well as self-service restore for service provider's customers.

Unified Exchange and Office 365 backup

Veeam Backup for Office 365 also allows you to protect hybrid-cloud email deployments as well as migrate mailbox data between Office 365 and on-premises Exchange.
