

Koalys Tele-Audiology

Advanced Digital Health Solutions

In today's world, access to hearing care is limited. The major trends that created the need to improve it are: increase of aging population, expansion of rural areas/medical deserts, lack of Audiology professionals & ENT physicians, long waiting times for appointments and overall high costs of hearing care.

Koalys brings hearing care to anyone anywhere

Our state-of-the-art Tele-Audiology platform empowers ENT physicians and audiologists to perform a complete and accurate examination within the realm of a remote consultation. This end to end solution could be integrated within an existing tele-medicine platform as an additional module, deployed as a stand alone kiosk, or be used as a mobile clinic for fitting.

Extended reach

Accessibility

Cost effectiveness

High standard
of professional service

Key Features
