TRAINING SAFELY
WITH THE
HGV SIMULATOR

Ignition
DRIVER TRAINING

Our sophisticated mobile HGV Simulation system is modelled on a 747 aircraft simulator which has been custom designed to help deliver the best training possible, in a safe and cost effective environment.

With our qualified Driver Training Team at the helm, we can facilitate driver coaching, mentoring and improvement to ensure that your HGV driving fleet is maintained at maximum efficiency, **potentially providing great cost savings across your supply network.**

The simulator brings a host of benefits, with the ability to train drivers in one static location.

Providing experience with adverse weather conditions, vehicle failures (breaks, steering etc), and manoeuvring in tight spaces, it is the perfect system to enable drivers to become road ready without ever leaving the yard.

The mobile units can be transported to any location, and corporate driving assessments can then be conducted within the unit.

Driver observations can be re-visited to review improvements in driving style, fuel efficiency, harsh breaking, gear change methods and more – highlighting training requirements and providing performance markers to ensure continuous improvement through a drivers tenure.

With huge savings on costs (insurances, fuel efficiency, VMU costs, maintenance costs) this system has been fundamental in developing HGV drivers, whilst keeping costs at a minimum.
