

# Bail Kiosk

An Attendance Recognition System (ARS) Product

Spend time Policing,  
instead of Administering

Bail Kiosk is an Attendance Recognition System that enables a person on bail to report via a self-service kiosk at a Police station, instead of reporting to Police staff at the counter.

Over a 12 month period, self-service Bail Kiosks can save thousands of shifts, freeing up Police staff to focus on other Policing activities and providing better community outcomes.

Bail Kiosk utilises a device with a camera, facial matching technology, and integration with Police systems to automate the bail reporting process.

"With Bail Kiosk in the station I can spend my shift working on other activities, instead of having to manage Bailees."

"I have noticed a change in our station [since getting Bail Kiosk], with shorter cues for the front counter the wait time is less and people we see are less agitated when it comes to their turn. It makes my role easier to perform and a more pleasant experience for all."

"Using Bail Kiosk means I don't have to wait for ages to report into the person at the counter." [Person using Bail Kiosk.]

*Quotes from Police staff.*

# Example Scenario:

## Without Bail Kiosk

Multiple Police staff spend most of their shift conducting identity checks and recording people reporting into the Police station, as per their bail conditions. Police staff must manage people who are becoming irate at having to queue for extended periods of time, and must juggle the needs of those reporting against those needing Police assistance for other matters.

## With Bail Kiosk

People on bail can conveniently self-serve in the Police station and Police staff can spend their shift focusing on other Policing activities.

## Benefits

- Dramatically reduce police resources required to manage people reporting on bail
- Redeploy staff to other policing activities
- Reduce waiting times for everyone at Police station counters
- Deployable to any device with a camera
- Integrated with your system of record to receive updates to reporting conditions and notify when a person successful reports in using Bail Kiosk.
