

Akkodis M365 Copilot Accelerate Program

Revolutionize your business processes and drive growth

Leverage the power of AI to boost your productivity

M365 Copilot is an AI-powered productivity assistant that combines the power of large language models with your organisation's data to turn everyday productivity tasks into an assisted and accelerated set of actions using prompts. It is built into Microsoft 365 and can help you with tasks such as summarizing meetings, drafting emails, generating content, creating PowerPoints and improving language. Copilot is designed to increase productivity, and our Pilot Accelerate Approach can help you.

Akkodis has developed a 5 Step Accelerate Program to accelerate pilot deployments of Copilot over an 8-to-20-week period. This Accelerate Program focuses on User Experience, Change and Adoption and Technical subject matter expertise to enable and empower users to confidently identify personas, use cases and adopt new ways of working. The program captures key metrics, developed use cases and success criteria to optionally support business case development, full deployment activities and next steps.

The Accelerate program helps clients accelerate productivity gains with Copilot, by embedding a User Centric Approach to client's copilot user base. We leverage M365 Copilot for Adoption Kit for generic technical and training capability and extend and tailor this for specific use cases, personas and user needs to support their adoption.

The Data Driven Decision Maker				AKKODIS	
✓ Policy Advisor	✓ Strategic Financial Analyst	✓ Revenue Data Analyst	✓ Financial Data Specialist	✓ Excel: financial data analysis, modeling, and visualizations.	✓ Teams: For collaboration with other teams and departments.
