

100PLUS REMOTE PATIENT MONITORING

100Plus is the fastest-growing remote patient monitoring platform empowering doctors to manage their chronic patients remotely and proactively engage them to avoid expensive, episodic care and drive a higher quality of life. When a Medicare patient receives a 100Plus medical device, it's at no cost to them, fully configured, and ready to use out of the box - no smartphone, app, Bluetooth, or WiFi required. Reduce episodic care and improve patient care by continuously monitoring high-risk seniors in your population.

HOW IT WORKS

Prescribe RPM Devices to **Chronic Patients**

Doctors and nurses recommend devices that capture, store, and transmit physiological data. 100Plus provides all the hardware, connectivity, and patient support1.

Review Patient Data (Monthly and Alerts)

Clinicians (Doctors, Nurses, or Medical Assistants) review patient data monthly to identify and intervene with at-risk patients. 100Plus provides all the tools for you to facilitate this process.

Receive Medicare Reimbursements

Medicare pays \$700 per patient per year for remotely monitoring patients.

THE ECONOMICS FOR PROVIDERS (ANNUALLY)

How much your practice can earn each year with 100Plus RPM	Medicare reimbursement frequency	50 patients	250 patients	800 patients
CPT 99453 RPM setup and patient education	\$25.46 — one time per patient	\$1,273	\$6,365	\$20,368
CPT 99457 Review, interpretation, and basic communication of RPM data insights for the first 20 minutes	\$61.48 — monthly per patient	\$36,894	\$184,470	\$590,304
CPT 99454 co-pay RPM devices and services	\$16.93 — monthly per patient	\$10,160	\$50,802	\$162,566
Practitioner yearly net revenue potential		\$48,327	\$241,637	\$773,238

PLATFORM & DEVICES

Access your patient data anytime with the <u>100Plus Provider Portal</u>. Get accurate and up-to-date patient health data to inform patient visits and preemptively manage patient care before costly episodic events occur. The data is designed to inform you of health trends and alert you when a patient is at-risk or out of a healthy range.

The <u>100Plus Blood Glucose Meter</u> consists of the meter itself, test strips, and control solution. The glucose meter uses a small drop of fresh capillary whole blood placed on the test strip to produce an electrical current which is read by the meter to produce a glucose level reading. The meter displays the result within 5 seconds to your patient and streams that information directly into the Provider Portal.

The <u>100Plus Blood Pressure Cuff</u> sends fast and accurate reading using an advanced measuring technique. Patient blood pressure measurement is automatically sent to the Provider Portal.

The <u>100Plus Pulse Oximeter</u> reads a patient's pulse and blood oxygen levels, instantly. The device automatically streams data to the Provider Portal.

The <u>100Plus Digital Weight Scale</u> enables providers to remotely monitor crucial changes in patient mass providing insights that are critical for patients with congestive heart failure or weight-related health issues like obesity

The <u>100Plus Digital Thermometer</u> reads a patient's temperature in one second, either with or without contact. Keep track of temperature fluctuations that could indicate a viral or bacterial infection in your senior population.
