

CASE STUDY: CGI

31,000 professionals in 125+ offices worldwide make CGI one of the largest IT consulting organizations in the world. CGI supports clients in the areas of systems integration and consulting, system development and implementation, application management, technology management, and business process services.

SUMMARY

Client Web URL: www.cgi.com

Client Size: \$4.5 Billion; 31,000 employees

Client Market Segments: IT Consulting

CLIENT PROBLEM

CGI needed a tool based estimating methodology that was based on industry benchmarks, but that was compatible with standards used by its State government clients. They also needed independent estimates for some large projects, both to validate internal estimates and to offer confidence to their prospective customers.

PROPOSED SOLUTION

We developed a tailored set of estimating processes, supported by configured versions of estimating tools, and validated those processes and tools against actual projects. We also prepared independent estimates as requested.

RESULTS

The tailored estimating methodologies and tool support were successfully deployed, significantly reducing the time required to prepare estimates.

*No one ever excused his way to success.
