

## Viewing & Creating Application Tokens

Posted: Oct 02, 2019

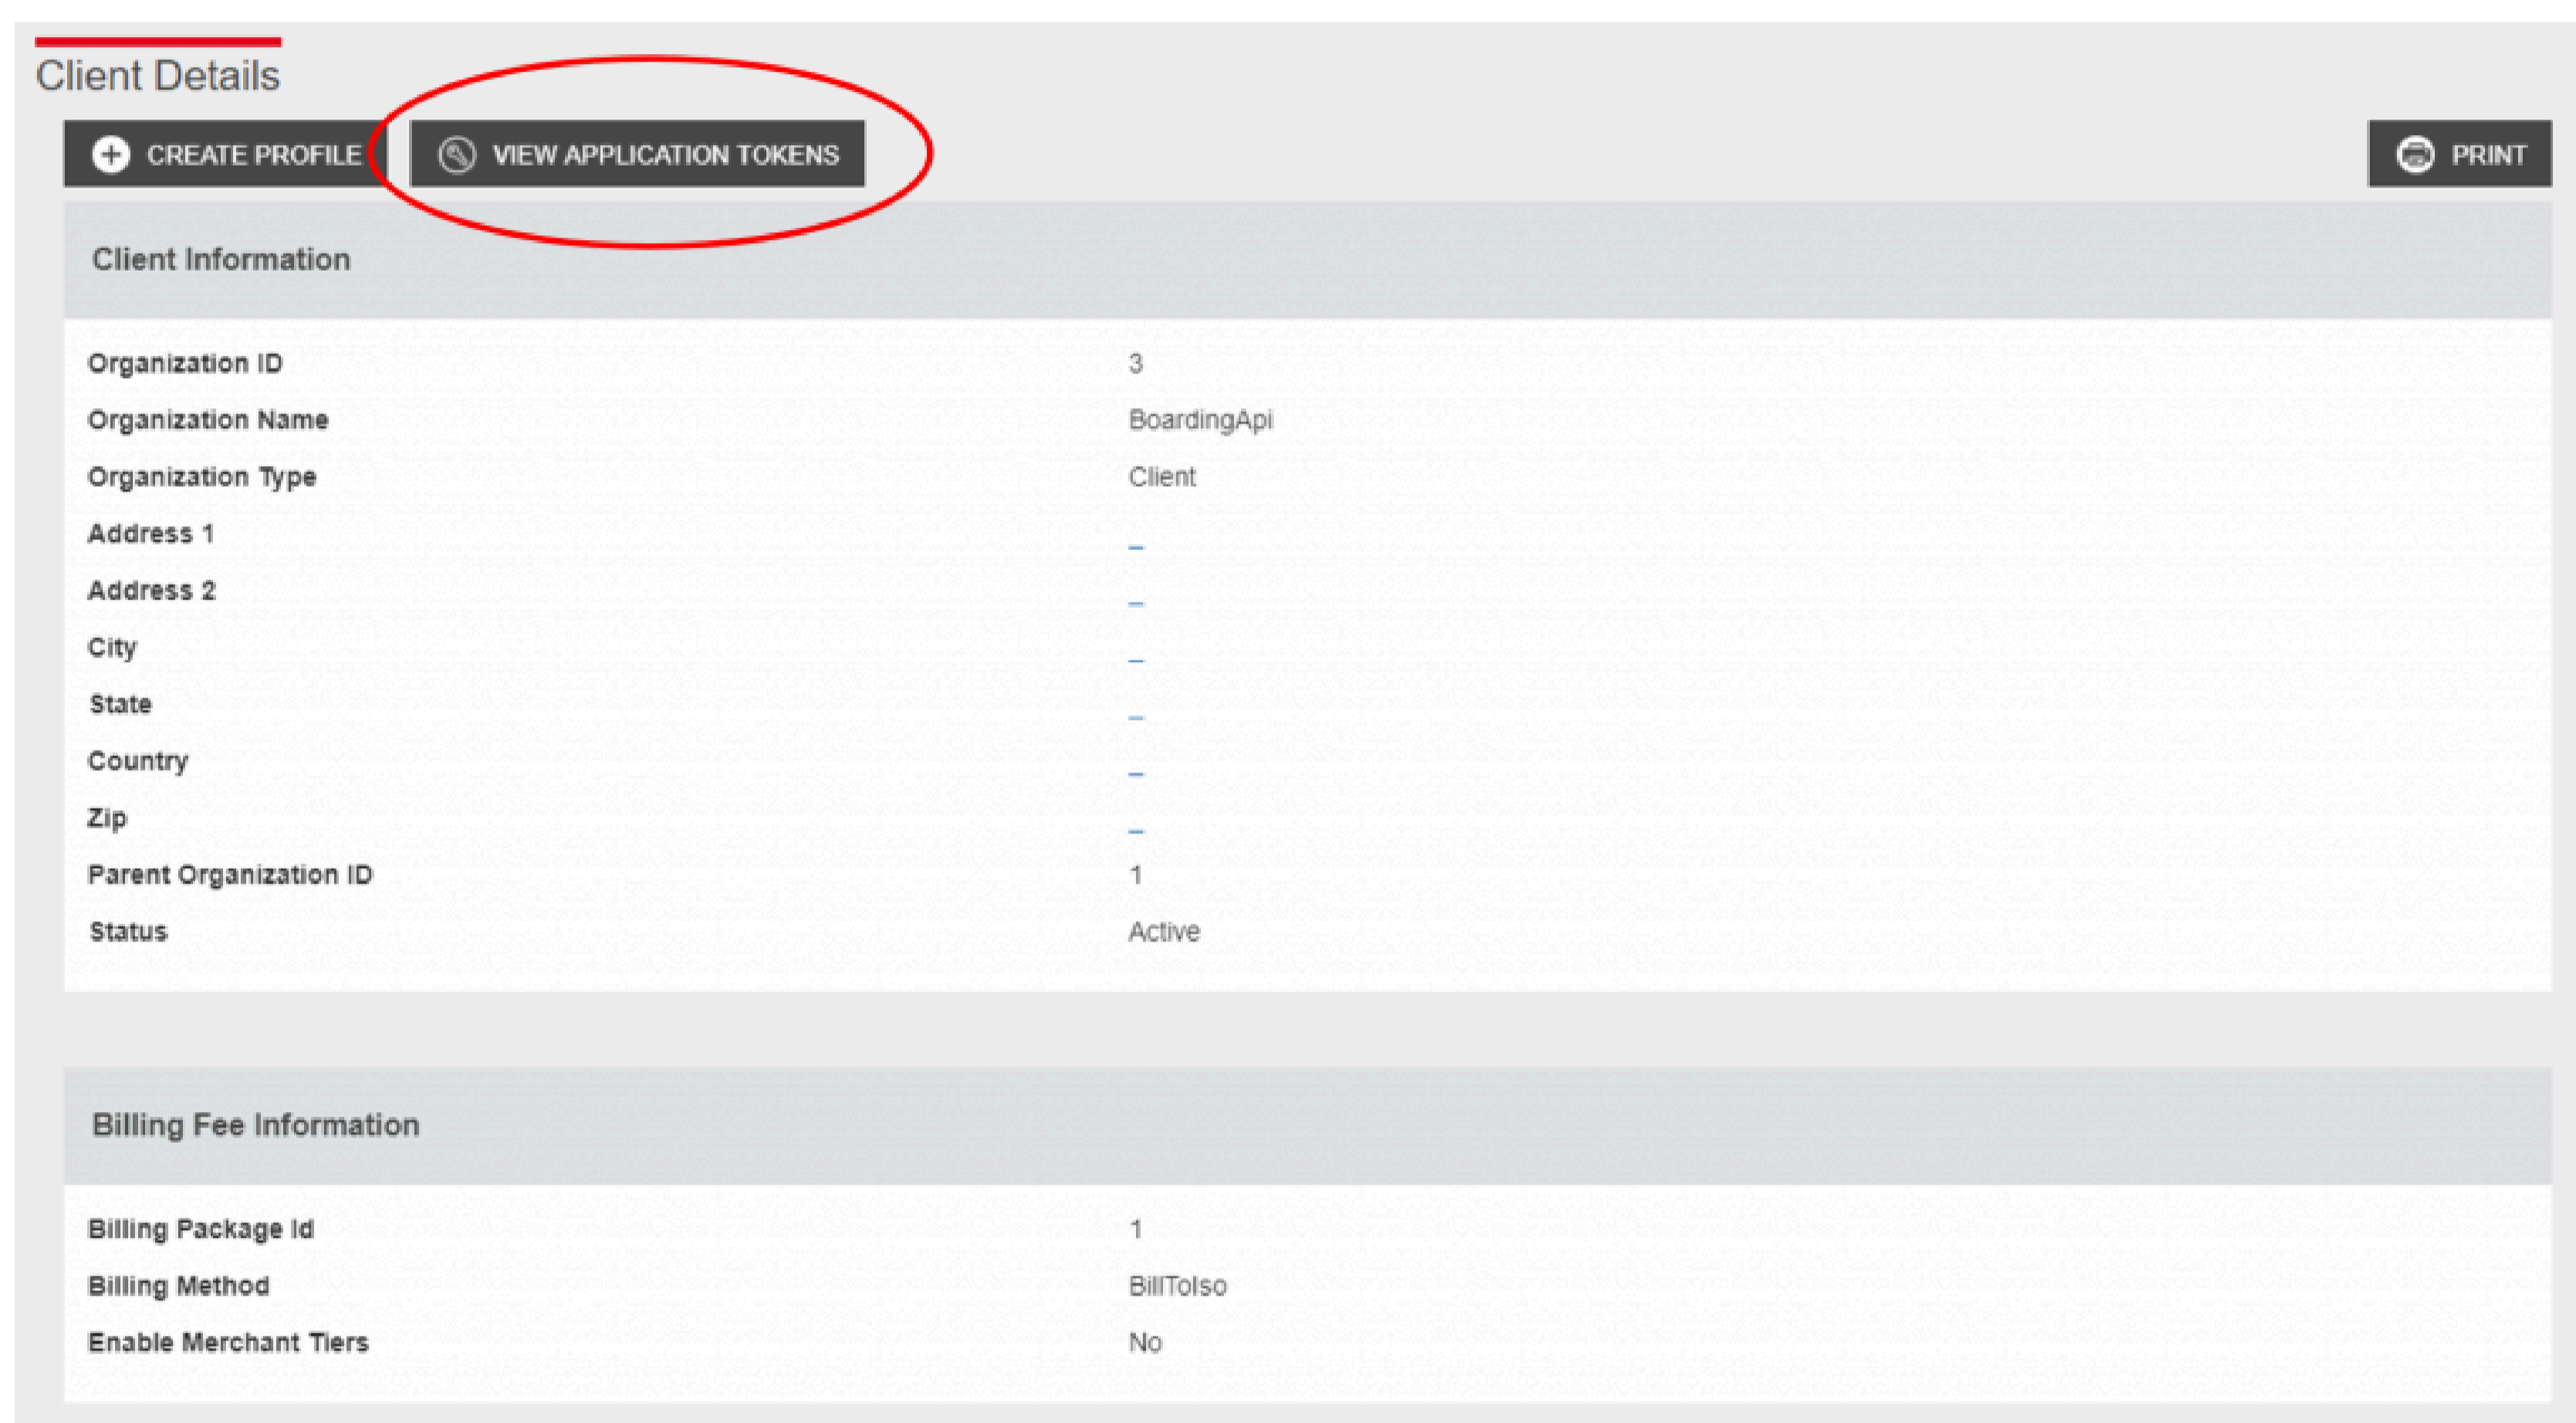

Application tokens are used for account validation within the Ingenico One platform. These tokens are unique to every client, as well as every environment. Please note: application tokens can only be used concurrently (by multiple users) if configured as such in the section below.

1. First, log in to ROAMsupport6 by following the steps outlined [here](#).
2. On the sidebar, open the **Clients** menu.

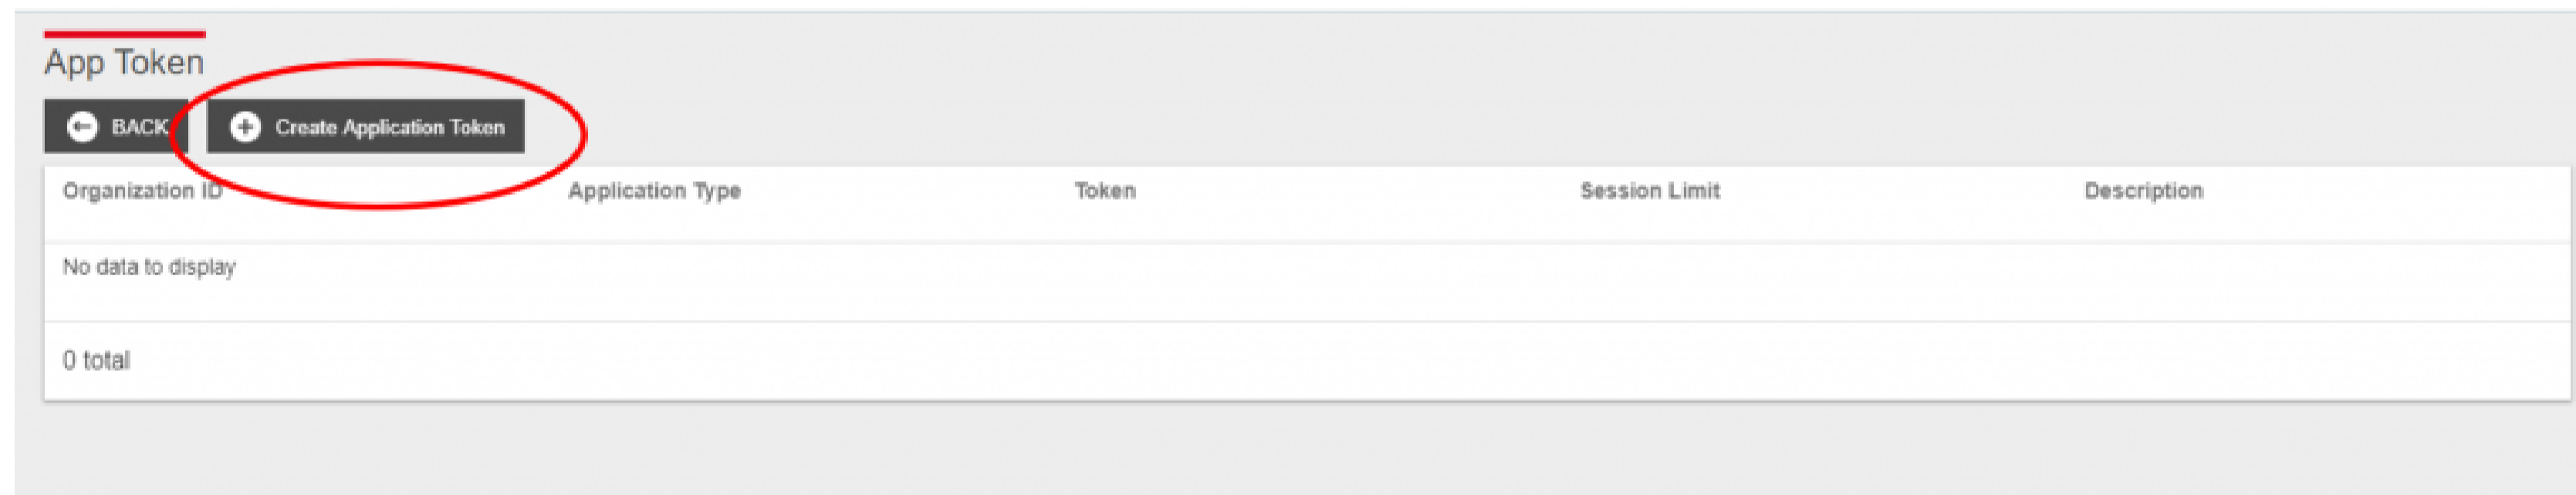

3. Click on **View Client**, under the **Clients** menu.

4. You will now be presented with the Client Details page, as shown below. Click on the **View Application Tokens** button, along the top banner.

5. Next, you'll be shown the Application Token screen. This will show a comprehensive list of all Application Tokens. If none have been previously created, the list will appear empty as shown below. To create an Application Token, click on the **Create Application Token** button to proceed.

6. ROAMsupport6 will now prompt you with the Create Application Token dialogue. Please select the Application Type and provide a brief description (required). You may also denote a session limit if you choose (this limits the number of active sessions for which the token can be concurrently used).

**Create Application Token** ✕

Application Type\*:

Description\*:

Description for session token..

Session Limit:

Enter Session Limit

Reset
Create

6. Finally, you'll be presented with an Application Token overwrite warning, denoting that your current, active, token will stop working as of the new creation.

**Warning** ✕

Create Token? (Warning: The previous token of this organization will stop working.)

Cancel
Confirm

Session Limit:

1

Reset
Create

7. Confirm the dialogue, and you will be presented with a new Application Token.

**New Application Token** ✕
