
What do the LED lights on the top of the Moby/5500 Reader indicate?

Posted: Jul 14, 2021

There are 4 LEDs on the front of the reader and a buzzer to indicate the progress of a transaction.

Card read successful – If a card read is successful, the reader will beep once after the transaction is processed. For contactless transactions, the reader provides a sequential flashing display of the yellow, green, and red LEDs.

Card processing error – All lights on the reader will turn off to indicate the contactless interface is not acceptable for a given transaction.

-For **magstripe** and **EMV** transactions: Single beep immediately.

-For **contactless** transactions: Two beeps, followed by a sequential flashing display of the yellow, green, and red LEDs.
