

Verifone Device Manager

Monitor, manage and maintain device health for your entire estate through our convenient, centralized platform.

www.verifone.com

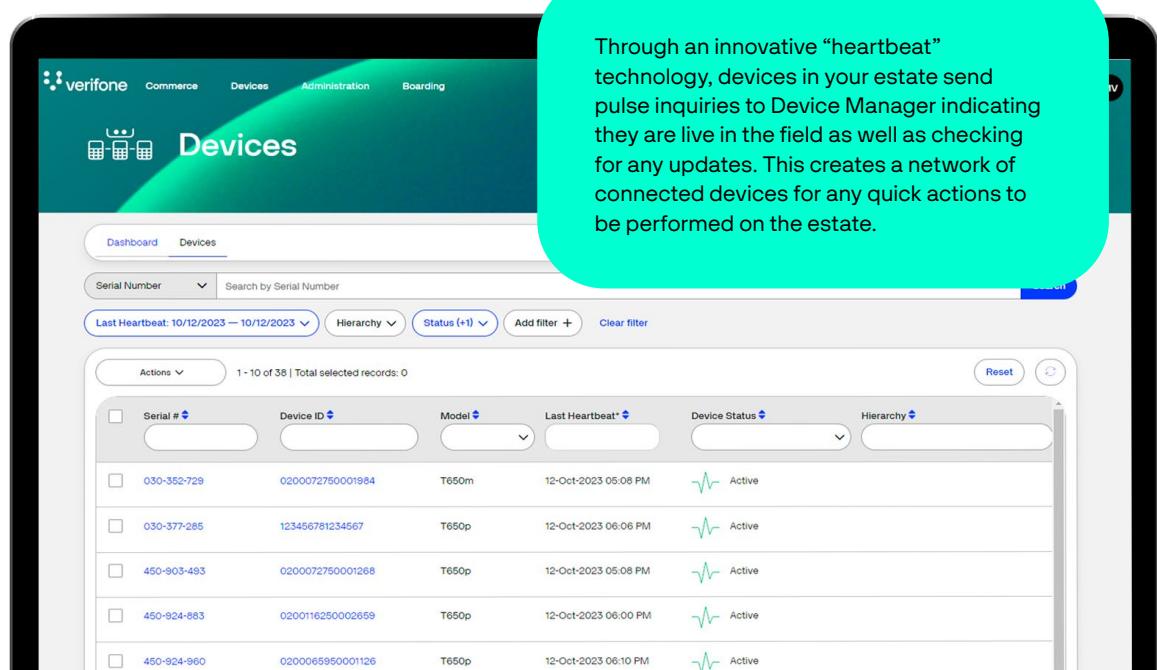

Put our device manager to work for your business. We'll help you keep track of your estate so you can focus more on what matters to you.

As payments technology continues to rapidly evolve and customer expectations shift along with it, the most successful merchants are those who embrace these changes to strengthen their business operations. As merchants look to adopt the new and innovative payment devices that define the era of convenience and experience in modern commerce, one critical question looms above the rest: how can operators – of all shapes and sizes – efficiently manage this emerging technology? What would it mean for your business to have a centralized platform that not only ties your devices together, but allowed you to leverage that control to maximize your investment?

Verifone's Device Manager empowers operators of any size to do that and much more. Whether your devices are scattered across the country or even across the world, our solution ensures seamless terminal management, ensuring that your operations run smoothly, securely and efficiently. With our solution, you can:

- Tie your estate of devices together and manage them all from a single, cohesive platform
- Monitor and optimize device performance with advanced insights, allowing you to proactively address issues long before they pose any impact on your business operations

- Centralize and streamline the organization and management of all applications and configurations for each device within a unified software library
- Employ intuitive tools and autonomous options for application uploads and downloads, software updates and third-party app integration for development partners
- Create custom rules and guardrails for when and how your devices are updated, whether that's by individual device or your entire estate

Through an innovative “heartbeat” technology, devices in your estate send pulse inquiries to Device Manager indicating they are live in the field as well as checking for any updates. This creates a network of connected devices for any quick actions to be performed on the estate.

Actions	1 - 10 of 38 Total selected records: 0	Reset	Clear

Keeping up with Your Devices has Never Been Easier

Manage a single library for all device applications / software

Monitor, configure and update devices remotely and securely

Engage your customers with powerful multimedia promotions

Solution Benefits

Consolidated Estate Management

Keeping track of each device's status, performance, software versions and more can be chaotic – but with our solution, it doesn't have to be.

- A single interface that helps your business stay connected, anywhere
- Easily monitor the health of your entire estate from a centralized hub
- Reduce risk and cost of downtime
- Get alerts in levels of severity

Engage with Your Customers.

Get more out of your device management platform by turning your devices into a marketing opportunity for your brand.

- Upload customized multimedia to devices
- Group devices by category when deploying that media
- Offer cross-selling and up-selling at checkout
- Turn your devices into marketing opportunities

Troubleshoot and Update Seamlessly

We understand that time is money for our merchants, so we designed our systems to give more of that time back to you.

- Streamline device diagnostics, troubleshooting and management across your entire estate
- Proactively identify and respond to issues before they impact your business
- Track device performance and alerts across your estate to solve problems
- Automate payment application downloads and software updates or exert complete control over rollouts with flexible scheduling options

Keep your Business Organized

Compiling and managing applications and configurations for all your devices in a single software library gives you calibrated control of your most critical touchpoints.

- Centrally manage in-store payments and easily upload and make available for devices
- Upload and manage third-party apps to a single cohesive Application Library
- Organize app bundles for personalized control over rules and guidelines that determine conditional downloads
