

WHAT IS HIVE POWER?

Hive Power develops a platform which provides consumers with the possibility to benefit from the creation of electrical energy communities on the Ethereum blockchain. Within those communities, neighbours can share their energy with each other, taking advantage of convenient tariffs.

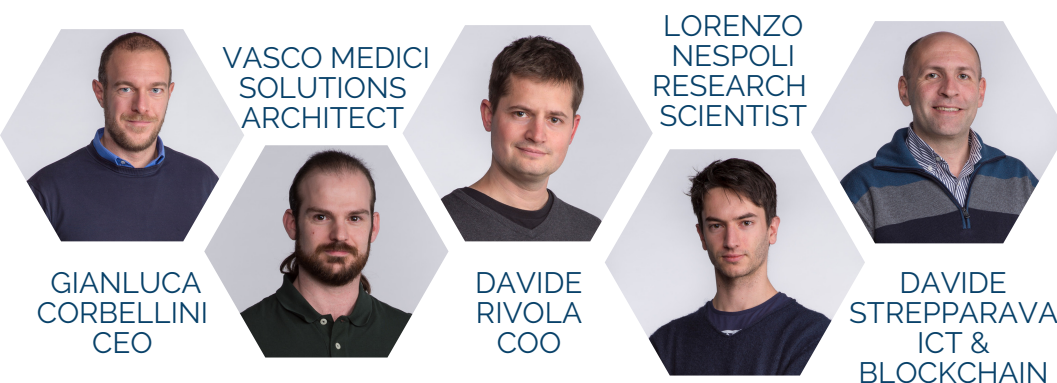

WHAT PROBLEM DOES HIVE POWER SOLVE?

The increasing gap between sell and buy energy prices is favouring the creation of local energy communities, where neighbours can share their own energy enhancing the community autarky.

HIVE POWER TOKEN

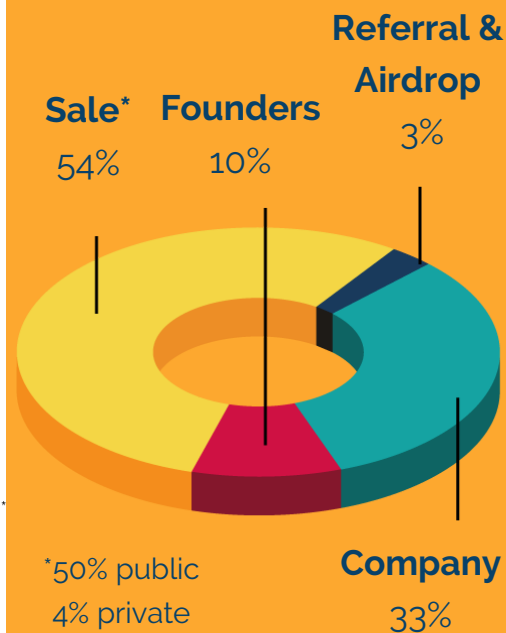

The Hive Token (HVT) is a standard Ethereum ERC20 token managed by a smart contract which gives access to the Hive Power ecosystem and its management. In order to reach a stable operation of the Hive Power platform, a "burn and stake mechanism" is in place: 50% of the HVTs are taken permanently out of supply and the remaining 50% are staked inside the contract.

TOKEN DISTRIBUTION

23RD APRIL - 13TH MAY

Token: HVT

Max supply: 100 Million HVT

Soft cap: \$ 1 Million

Hard cap: \$ 11 Million

Exchange rate:

1 HVT = 0.25 USD

Currency accepted: ETH
