

Directions:

Cut out the square, and fold this in half (colorful side up) so it forms a triangle, then half again, then unfold—you should now have two creases that form a cross. Now, fold the corners into the center of the square to create a smaller square, using the creases as your guide. Flip the square over, and fold the corners into the center again, once again making a smaller square. Fold and unfold the square in half both ways.

How to Play:

Pick one of the BrainPOP characters on the top of the fortune teller. Count the number of letters in their name—this is the number of times you will open the fortune teller. Now pick a number from the four you can see, and again open and close the fortune teller this amount of times! Now pick your final number - lift the flap to reveal!
