

# CaterSpot launches corporate management tool for its food delivery platform

**Singapore** – August 15, 2019 – CaterSpot today announced that it has released a new corporate management tool, its first step in providing an enterprise solution for corporates for food delivery.

The new feature lets companies manage employee user accounts, have full visibility over the orders placed by their users, track spending, and centralise invoicing.

Looking ahead, CaterSpot plans to enhance this new tool by offering more ways for companies to centralize and manage their food delivery with further budget controls, data & reports, dashboards and more personalized recommendations for employees based on the preferences and meal ratings.
