

# TIMELOGIQ

## IS WORKFORCE COMPLIANCE AN ISSUE?

TimeLogiq is a cloud-based time and attendance solution that gives you quick access to the attendance information needed to manage your people better. It is an integrated Microsoft Dynamics 365 for Finance and Operations solution that links with Project Management & Accounting, Human Resources, Resource Calendar, and Advanced Payroll.

TimeLogiq simplifies the assignment of rotations, manages leave requests, sends time records to payroll for processing and updates employee time records in various Dynamics modules. Employees can review and update their own schedules, and check vacation bank balances. Managers can view unit schedules, manage leave requests from their team, assign new rotations, and more.

# THE BENEFITS THAT YOUR COMPANY CAN GAIN FROM TIMELOGIQ INCLUDE:

## Reduced scheduling conflicts

by giving employees the freedom to access and update their information from a web browser.

## Decreased effort required to send scheduling data to payroll

through seamless integration with Advanced Payroll.

## Increased visibility into the availability of your staff

so confirmed shifts and staff leave requests are updated in real-time.

## Simplified compliance reporting

with detailed reporting on entered and scheduled time, time adjustments, project time, and absences.

**With TimeLogiq, your business can have access to an ERP add-on solution that simplifies time and attendance entry and increases efficiency through employee self-service features.**

# HOW DOES TIMELOGIQ SUPPORT MY BUSINESS NEEDS?

## PAYROLL INTEGRATION

Integrate with Advanced Payroll for payroll processing and generating advanced workforce analysis reports to improve decision making.

## PROJECT INTEGRATION

Reduce the chance of errors by exporting time records directly from TimeLogiq to Project for automatic timesheet creation. Save time by allowing TimeLogiq to automatically create timesheet periods and insert timesheet lines and properties for multiple projects.

## TIMEKEEPING

Easily configure rotations that generate standard time records for employees so that only exception time, such as absences or overtime, needs to be entered.

## LEAVE MANAGEMENT

Manage multiple entitlement banks for workers, such as annual leave, sick and unpaid leave, with accruals that can be based on custom calculations.

Reduce the administrative burden through employee self-service leave requests which update the Resource Calendar once approved to provide company-wide absence visibility.

## WORK CALENDAR

View an employee's scheduled activities as well as historical and future records that can be adjusted to reflect actual time worked as needed.

## SELF-SERVICE

Allow employees to request time off, fill out timesheets, and view reports and shifts through any web browser.
