TIMELOGIQ

IS WORKFORCE COMPLIANCE AN ISSUE?

TimeLogiq is a cloud-based time and attendance solution that gives you quick access to the attendance information needed to manage your people better. It is an integrated Microsoft Dynamics 365 for Finance and Operations solution that links with Project Management & Accounting, Human Resources, Resource Calendar, and Advanced Payroll.

TimeLogiq simplifies the assignment of rotations, manages leave requests, sends time records to payroll for processing and updates employee time records in various Dynamics modules. Employees can review and update their own schedules, and check vacation bank balances. Managers can view unit schedules, manage leave requests from their team, assign new rotations, and more.

THE BENEFITS THAT YOUR COMPANY CAN GAIN FROM ADVANCED PAYROLL INCLUDE:

→ **Reduced costs**

by minimizing payroll preparation time and errors.

→ **Streamlined data-sharing and extraction**

from other Microsoft Dynamics 365 for Finance and Operations modules to maintain accurate records.

→ **Standardized and automated**

complex payroll processes.

→ **Simplified compliance**

with payroll regulations and laws.

→ **Improved payroll accuracy and visibility**

through automation of calculations and in-product reporting.

With TimeLogiq, your business can have access to an ERP add-on solution that simplifies time and attendance entry and increases efficiency through employee self-service features.

HOW DOES TIMELOGIQ SUPPORT MY BUSINESS NEEDS?

PAYROLL INTEGRATION

Integrate with Advanced Payroll for payroll processing and generating advanced workforce analysis reports to improve decision making.

PROJECT INTEGRATION

Reduce the chance of errors by exporting time records directly from TimeLogiq to Project for automatic timesheet creation. Save time by allowing TimeLogiq to automatically create timesheet periods and insert timesheet lines and properties for multiple projects.

TIMEKEEPING

Easily configure rotations that generate standard time records for employees so that only exception time, such as absences or overtime, needs to be entered.

LEAVE MANAGEMENT

Manage multiple entitlement banks for workers, such as annual leave, sick and unpaid leave, with accruals that can be based on custom calculations.

Reduce the administrative burden through employee self-service leave requests which update the Resource Calendar once approved to provide company-wide absence visibility.

WORK CALENDAR

View an employee's scheduled activities as well as historical and future records that can be adjusted to reflect actual time worked as needed.

SELF-SERVICE

Allow employees to request time off, fill out timesheets, and view reports and shifts through any web browser.
