Subject: CH Robinson Client Advisory - Hurricane Sally 9/16/2020

Sally makes landfall, flash flooding threat for the Southeast

Early this morning, Hurricane Sally made landfall near Gulf Shores, AL as a category 2 hurricane. The very slow moving storm has lashed Mobile, AL and Pensacola, FL for much of past 12 hours, bringing extensive flooding to the area. Some communities near Pensacola have measured more than 30 inches of rain already. It may be quite a while before exact impacts are known for some of the hardest hit spots. LTL service centers are closed in these areas, and all transportation services should be considered non-operational at this time.

The largest continuing threat is flooding due to the heavy rain of slow-moving Sally. See the rainfall map below for more details, but a large swatch of rain is expected over much of the Southeast including Atlanta, Charlotte and Raleigh. While this rain isn't expected to cause widespread transportation issues, slow-downs and delays as well as localized flooding issues should be anticipated for any freight moving within the Southeast through the end of the week.

CHR continues to monitor the wildfire conditions in the West as well as the soggy conditions in the Southeast. Please reach out to you CHR representative for more, localized information concerning your business.
