(Residential)

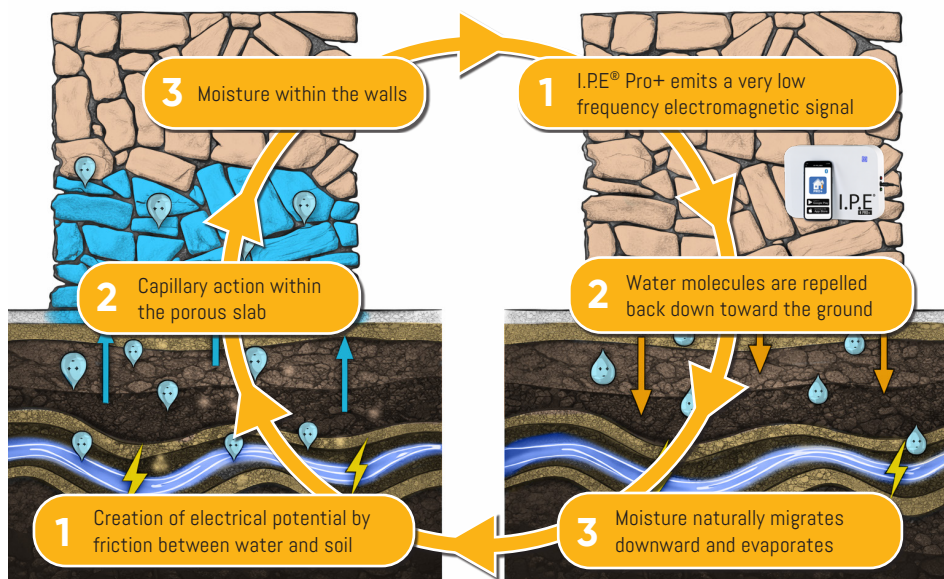

Chemical
Free

Rising damp occurs when groundwater is drawn up through porous walls like a sponge. As it rises, it carries salts that damage paint, plaster, and masonry over time.

The I.P.E® Pro+ system emits a low-frequency electromagnetic signal (~1.5 kHz) that alters the polarity of water molecules within masonry. By reversing their polarity, it stops capillary rise and allows moisture to naturally return to the ground.

- ✓ Permanently stops rising damp
- ✓ No invasive repairs or harsh chemicals
- ✓ One device treats the entire building

- ✓ Typical drying response within 6 months, with full dryness over 12–15 months
- ✓ Prevents mould and improves indoor air quality
- ✓ Backed by a 30-year manufacturer's warranty
